[CHIROPRACTIC: An OKC M.D.'s Warning](#)

Posted by [Bryan Farha](#)

on December 16, 2008M at 10:47 pm

[NECK ADJUSTMENT & STROKE? A WARNING FROM BILL KINSINGER, M.D.](#)

The birth of chiropractic occurred in Davenport Iowa in 1895. Daniel David Palmer was an uneducated grocer who longed to find a cure for all disease. He reportedly cured a deaf man by manipulating his neck and convinced himself that he had indeed found the cure for all ailments. Palmer claimed that 95% of all illness could be eliminated by manipulating the spine, a procedure he called an “adjustment.” The Palmer School of Chiropractic is still considered the “fountainhead” of chiropractic and the theories and practices that are taught there in the 21st century are virtually unchanged from the ideas that D.D. Palmer put forth just over 100 years ago.

That Palmer’s theories have no merit and no scientific basis is troubling enough. Our health care system is struggling with skyrocketing costs and wasting those dollars on quackery seems to be totally illogical. Making the matter worse, chiropractic is not without significant hazards. Chiropractors believe that part of the spine in most need of “adjustment” is the upper neck. Unfortunately, a small number of patients who have their upper necks twisted will suffer a stroke. Most of these patients are woman between the age of twenty and forty-five. Some of them will recover; others will die or suffer permanent and

profound neurological injury such as quadriplegia. The benefits of chiropractic treatment are minimal or non-existent. The risks are tremendous.

..... Bill Kinsinger, M.D. [invited blogger]

Hello all

Dr. Kinsinger has done a fine job in researching the chiropractic industry. I know; I am the UNNAMED "Chiropractic Enemy #1". And, I have already fought that industry at the Board level ... and won.

In a way, I am an insider. You see, my grandfather was a famous chiropractor who was completely disillusioned with his profession. And yes, I have documentation that goes back at least twenty years that shows his effort to force Chiropractic to raise it's standards. Dr. Kinsinger and I have spoken several times, in fact, and he should remember me.

What Dr. Kinsinger is not talking about, and he very well should be, is that the atlanto-occipital joint, (where the head and spine come together), is depicted incorrectly in the anatomy textbooks. Now to a medical doctor this may not be a big deal since, after all, M.D.'s don't usually go around forcing bones in that region.

However, manipulating the upper cervical spine is the bread and butter of the chiropractic industry, and please rest assured that the chiropractic schools don't have any better information than what the anatomy textbooks show, which as I said, is in error.

Yes, it is extremely dangerous to have anyone manipulating bones that they don't understand the true architectural design of. This has been my contention for more than two decades. And believe me, I have been screaming at that industry for as long.

Please see: <http://www.nsirtech.com/condyles.html>

Now I have spoken to I can't even begin to tell you how many doctors, and not all of them have been chiropractors, through the years about this issue. The doctor's response is virtually the same, no matter who I am talking to. What I hear, in almost a flippant, callous, disregard for the obvious truth is this: "What difference does that make ... two verses four?"

My response is simply, form and function. Hand in glove. If you don't understand how the joint is formed, or designed, you can't possibly understand how it works. You can't understand the difference between normal and abnormal. And if there is something abnormal, or wrong, you can't possibly understand what exactly it is, that IS wrong, let alone, you don't know how to fix it.

Yes, chiropractors should be BANNED from working in an area that they know nothing of, as should anyone else. Now, I am here to let you know that not only do I know the TRUE design of the atlanto-occipital joint, but I know how to fix it, and believe me every case is specific to itself.

Now, I would love to be able to think that this post would get the attention of the 'good' doctors out there who would like to not only shut down the farce of chiropractic, but would actually be willing to do what the chiropractic industry refused.

Sincerely

Comment by **Cam inam** on August 7, 2011 @ [10:38 pm](#)

Um so Tammy, you've come on an anti chiropractic blog to speak out against chiropractic and are hoping for the people on this blog to support you in your efforts to rename chiropractic so you can practice without a license? You know if it walks like a duck, talks like a duck it's not a horse

~~~~~

Comment by **[Tammy Jov Kenndy](#)** on August 16, 2011 @ [10:26 pm](#)

I do practice without a license Cam, and I don't need your approval to do so. Anyone who inquires about what I can do for them knows my expertise, I assure you. They can also see very clearly what I've been trying to explain to people such as yourself, for years. My presence here is due to my previous contact with Dr. Kinsinger, albeit he has not asked me to comment.

My message is simply, let's step up what Dr. Kinsinger has tried to do. I mean ... come on! ... a blurb about how upper cervical neck manipulation can cause stroke, etc., [Quote by Dr. Kinsinger: "Ill tell you what. I will make a deal right now. If the ACA and the ICA, we can forget about the WCA since they are total wacko zealots, will agree right now on this blog to mandate that their members begin to provide their "patients" with informed consent (including the "rare" but well documented phenomenon of stroke following upper neck manipulation) by the year 2013 I will officially hang up my "gloves" and walk away. No more blogging, no websites, no presentations, nothing. You will never hear from me again.

Deal?

I'm waiting for a response."], ... IS JUST NOT GOOD ENOUGH! ... and quite frankly makes me very angry. If that's all he wants, then everything that Dr. Kinsinger has done up till now ends in a little poof with no real effect. I mean ... what was the point?! ... when he could do SO MUCH MORE.

And THAT, is my response.

I can take what he has accomplished one step further ... and quite frankly if he does not seek me out in order to SERIOUSLY drive the nail into the chiropractic coffin ... I can only say that he truly is not serious about his cause.

Debate? Absolutely!! Count me in .. just name the time and the place. I will be there.

Tammy Kennedy
Certified Nerve Signal Interference (NSI) Specialist
(580)402-3375

PS. Chiropractic is a fraud the way it stands today. Now either the chiropractors will pay me in order to be able to put Dr. Kinsinger's criticisms down for the count and FINALLY raise their standard, which I believe is what Dr. Kinsinger wants and has been working toward .. OR, the medical industry, or physical therapists, will pay me and then be able to take the lead in manual therapy. Either way, I guess I am game.

PPS. By the way, I delivered my daughter without any help from an anesthesiologist. And, it was the MEDICAL system, NOT the chiropractors, that killed her, just barely over eight years ago now. Yesterday would've been her 25th birthday.

~~~~~

Comment by **Marcus Bach** on August 17, 2011 @ [8:33 pm](#)

Tammy,  
You seem to think you are very wise. In your infinite wisdom would you please attempt to explain why if Chiropractic is such a fraud why do people continue to go. For 116 years it has been the patients who have kept the profession alive. Even against the powerful medical and

Pharm companies the Profession survives. You can jump up and down and make all the noise you want but your colors are showing. You are not trained to do anything worth talking about no matter how hard you market yourself and also I seriously doubt that anyone in your family was a “famous” chiropractor. If they were I’m sure your family is very proud of you. Please keep posting. It’s entertaining.

~~~~~

Comment by **Cam** on August 17, 2011 @ [9:59 pm](#)

Tammy

Just because you change the name of what you do does not mean it’s not chiropractic. You spout chiro ideas but you are too ignorant to realize it. You even use chiropractic terms! I think that someone should forward your comment to the ok board of chiropractic after all you openly admitted you practice chiropractic illegally. I mean just because they dropped charges last time does not mean they can’t bring them again, as they should. Just because you only adjust the two parts of the spine doesn’t mean it’s not chiropractic. As for your assertion that the skull articulates on 4 and not 2 condyles is very interesting. When I went through med school and actually looked at a gross specimen I saw 2. So where exactly would you with your mentorship under your grandfather have seen gross specimens? Or is it because good ole grandpa said so?

~~~~~

**THE MISSING POST:**

Comment by **[Tammy Joy Kenndy](#)** on August 19, 2011 @ [10:52 pm](#)

Why do people continue to go? Unfortunately, they apparently have no other choice, or so they think.

Thing is, I have found plenty of people who have been to not just one but many chiropractors, and their report is the same. The chiropractor actually hurt them, but, they didn’t want to have surgery and the pills didn’t help either. The 30 minutes, or if they were lucky, couple of days, they didn’t have symptoms, gave them some measure of hope that perhaps the chiropractor would fix the problem the next time. Besides, the DOCTOR told them to come back more than likely, and insurance was locked in already. As we know chiropractic has been a political force for at least 80 years. And unfortunately, the people who return to chiropractic ... time ... after time ... after time, simply have not found us yet. Mark my words, more than likely they will in time. And when they do they will be asking a lot of very POINTED questions, such as why oh why didn’t chiropractic listen to us when we first offered it to them.

As we all know, chiropractic is geared to keep the patient coming back repeatedly. And quite simply, the chiropractic doctors who did in fact recognize this as the best technique, either did not learn the technique because they didn’t want to let their patients go, filed the technique (if they did learn it) and only pulled it out in what they called a crisis situation, or as Grandpa put it, fell flat on their face because they didn’t know how to make it pay. After all, the patient got well,

and I understand that the insurance wouldn't pay but a certain amount per treatment. Hence, more treatments, meant a BIGGER cash flow to the chiropractor. Ask any chiropractor who has attended one of the seminars on building a practice, my guess is that actually fixing the problem was not on the list of things to do.

The reason why this work is NOT chiropractic is more than just legal you know. Scientifically, this work is designed to set the person free, free from pain without having to be under constant "therapy". Why? Because it actually fixes the real problem, and that base cause has absolutely nothing to do with the spinal column.

You see, the atlanto-occipital and sacro-iliac joints are NOT spinal joints, nor are the head or pelvis part of the spine whatsoever. What I am dealing with is extra-spinal, which means beyond the spine, and if you look in the textbooks and the medical dictionaries you will find that the spine ends at the atlas on one end and only includes the sacrum and the coccyx on the opposite end.

Believe me, "subluxation" is NOT a chiropractic term; however, a "vertebral subluxation", is most definitely a chiropractic term. The chiropractors believe in the vertebral subluxation ... I DO NOT.

I never said that I was a chiropractor, nor did I say that I practiced chiropractic, either with or without a license. What I said, was that I practiced without a license and that I did not need your approval to do so. I clearly put my title behind my name so that there would be no confusion either. Mark my words, the Board knows what that means, even if you do not.

And, in case you misunderstood, the Board did NOT drop the charges. I BEAT THEM, FAIR AND SQUARE:

<http://www.oscn.net/applications/oscn/getimage.tif?submitted=true&casemasterid=147982&db=GARFIELD&barcode=1006986249>

<http://www.nsrtech.com/PDF%20files/dawn.pdf>

As far as the "gross specimens" are concerned, I actually OWN two. One specimen consists of a quarter section of the skull, (which includes the foramen magnum and occipital condyles), and the top four vertebrae (matching), the other, is an entire human spine, and the pelvis (also matching). These actual bones were what my grandfather made his discoveries on and they were passed down to me when he died. They are my inheritance from him. Where he got them, I cannot say about the spine set, but I know that he got the skull set from a colleague. I imagine that the spine set came from a colleague as well.

He also did two dissections at the Osteopathic College in Fort Worth, TX in 1985 in order to examine fresh tissues. What he found was very clear and was put on film. I have seen the film. My cousin has our only copy and refuses to part with it. The college, when I tried to get a copy from them, acknowledged that the film existed, but had no idea what had happened to it.

And by the way, when I visited the Palmer Chiropractic College in Davenport, IA on their summer break of 2007, I walked the halls and looked at the many “gross specimens” that they had behind glass. What I found predominantly was four facets. Only a couple were not obviously defined, and this, I am sure, was due to erosion of the bone.

Comment by [Tammy Kennedy](#) on August 21, 2011 @ [12:04 pm](#)

Now isn't that interesting?

I always said the reason why we weren't being listened to had to do with politics.

My last post has disappeared. Wonder who might have taken it down.

Guess I will have to post it on my web site. Good thing I saved this blog to my hard drive.

This ain't my first rodeo guys.

One more thing, don't think that I don't know the reason why the textbooks haven't been corrected by now. The reason why the textbooks have not been corrected is because this revolutionary discovery was made by none other than a retired chiropractor. Had he been a medical doctor or an osteopath the medical community would have had to take him seriously.

Tammy,

I removed your last comment because I considered it to be personally attacking to some—which I don't tolerate. I've removed before and I will likely do so again. I realize on many (if not most) blogs, “anything goes.” But I made a decision when I started this that comments had to be respectful. Disagreement is fine—even strong disagreement. But not attacks. I hope you understand.

Bryan (Smoke & Mirrors blog coordinator).

~~~~~  
Comment by [Tammy Kennedy](#) on August 21, 2011 @ [3:56 pm](#)

Hello Bryan

Glad to know you are looking in. Perhaps we can converse professionally in person soon.

But first, I have a few questions for you.

How is it that the two posts made on August 17 above are not “attacking”?

And I quote: “... You are not trained to do anything worth talking about no matter how hard you market yourself ...”,

” ... you are too ignorant to realize it ... “,

“... When I went through med school and actually looked at a gross specimen I saw 2. So where exactly would you with your mentorship under your grandfather have seen gross specimens? Or is it because good ole grandpa said so?”

... end quote.

You know I could have been very droll in my response to these attacks. Instead I elected to handle the “criticism” in a very professional manner. Regarding the question about why do people continue to go to chiropractic I can imagine that Dr. Kinsinger would have probably answered something similar.

As far as the latest post by Cam is concerned I cannot find any merit to anything he has to say. There is an obvious diversion from facts and he makes baseless accusations and even threats. And then he goes so far as to make the claim he is an authority because he’s been to med school and has seen the real McCoy, at least once. Then he actually pokes fun as if I don’t know what I’m talking about because I had not been to med school and had no resources regarding the atlanto-occipital joint. And all this when I am clearly showing this blog the proof:

<http://www.nsrtech.com/condyles.html>

I simply answered both posts factually. And then you took down that proof. What’s up with that?

The consensus on this side of the screen is how on earth can the authorities continue to pretend like I have no real contention here. The latest opinion that was presented to me here was why hasn’t someone called me personally to discover more about what I know instead of poo-pooing my obvious knowledge.

I mean I thought cutting edge was to be desired.

PS. Now don't think that I'm asking you to take down the above mentioned posts. I'm not. They showed their colors, and I think it is proper that the world sees. In fact if you took the posts down now it would only look like someone's hiding something. And since it appears that the debate will not be happening on campus, this blog is all we've got, isn't it?

~~~~~

Comment by **Bryan Farha** on August 21, 2011 @ [4:06 pm](#)

Tammy—I didn't take down your comment because of the facts you presented—it was because of the personal attacks. As far as the examples you cite as also being personal attacks, I judged yours as a level above those. It's arbitrary.

As has been my policy in the past, I will not continue to dialog regarding this post—I created it for others. Periodically, I will chime in, but for the most part, I stay out. I hope you understand.

~~~~~

Comment by [Tammy Kennedy](#) on August 21, 2011 @ [4:29 pm](#)

OK Bryan

Give me an example. You can call me directly. I don't think your "judgment" has any merit unless you can name the "offense".

Once again, my post was not disparaging in any way. It was simply factual.

Tammy Kennedy
Certified Nerve Signal Interference (NSI) Specialist
(580) 402-3375

PS. I will be speaking with a trusted college professor here to get his take on your opinion.

~~~~~

Comment by **Marcus Bach** on August 21, 2011 @ [9:29 pm](#)

Brian is judge and jury. At least here but not at OCU. I know your co workers. Tammy your grandfather was not famous and he really didn't practice Chiropractic. It was a distorted, gross interpretation of Chiropractic. I know you got away with one in 08 but prepare yourself. Things

in the state are changing rapidly and I will see to it that you and others like you will not destroy what so many have spent their lives to protect.

~~~~~

Comment by [Tammy Joy Kenndy](#) on August 22, 2011 @ [12:12 am](#)

Well Marcus you better hope that I'm not ahead of you in reaching the grass roots. And by the way, when I spoke to Viki Resler, the first woman chiropractor ever on the Board, she explained to me that the whole matter was a dead horse to the Board. She simply stated ... you won ... and it's over. She also wished me well and said that since she had affiliations with the Board that she could not do anything more regarding my efforts to free the people.

I will be putting up my video soon on my web site that shows my presentation in Chicago in '07. The crowd turned against the chiropractors at that time just so you know.

Tammy Kennedy
Certified Nerve Signal Interference (NSI) Specialist
(580) 402-3375

PS. Thanks Bryan for letting the "questionable" post out after all. And just so you all know, there is more than 60 years of collective effort between me and my grandfather here. And, I have done more in the last ten years than he did in the previous forty. What is our hope? To see chiropractic either improved, obviously not because they readily chose to, or, extinct. We have always worked first toward the former, and the latter was because of necessity. You should know, I have no intention of quitting now. My book will be in print soon.

~~~~~

Comment by **No one important** on August 22, 2011 @ [11:30 pm](#)

@Tammy

Have you considered getting some sort of education so that people take you seriously? I'm not trying to be rude, I'm really not. People just don't tend to listen to people that do not have the credentials To back up what they are saying. Does not mean you do not know what your talking about just that people want to see some kind of degree or something that says wow I should listen to them. For many years MD, DO, PT, OD, DDS, DC and many others have used the likes of Netters and Greys anatomy to learn human anatomy you have to give people a reason to believe that everyone was wrong. Anatomist agree that the occipital condyles one on each side articulate with the a matching facets on each side of C1. Without sounding rude why would we take your word to the contrary? As knowledagble as you may be, what authority do you hold besides a designation that you (or your grandfather) created? I'm really not trying to be curt or anything like that, I'm just saying like I see it. If some dude got on your plane and he was not educated by convention on how to fly your plane, but assured you his grandfather had taught him a better way to fly a plane would you stay on the plane? We want proof this day and age. Proof that this person has the knowledge to even address the topic. That being said I commend you on

your convictions, but have you considered that your grandfather was wrong? If the condyles ride in 4 facets how does that translate to movements of that joint? If this were the case you would see limited theta-x movements. If the condyles are actually 2 per side and the facets on c1 are also 2 per side you would see two joint capsules on each side and that would render the joint immobile making it more like a syndesmosis, vs an actual articulation. Now I understand this is what you have been taught, and I get that I think we should all stand for something, but with no visible credential how or why should we take you as an authority on the matter? Also you market yourself as a nerve interference specialist and as hardcore as that sounds what formal education do you have in the human nervous system? Also if what you do is not chiropractic then why do you use chiropractic philosophy on your website? Reading the information on your site is nearly verbatim the same things I've read on chiropractic websites. I noticed your grandfather had Ph.C. after his name after a few minutes on google I discovered this is a designation from palmer indicating a chiropractic philosopher. I find it interesting that your philosophies so closely parallel that of chiropractic. You seem to even use chiropractic terminology. I guess considering your grandfathers education in philosophy it should be no surprise. Good luck with you quest

~~~~~

ANOTHER MISSING POST:

Comment by [Tammy Joy Kenndy](#) on August 23, 2011 @ [1:42 am](#)

I get what you are saying, really I do. But, I have proven the facts in the pictures:

<http://www.nsirtech.com/condyles.html>

I can see it, as can most people. It is only the "educated" doctors who REFUSE to see it. It's not my fault that they won't believe their own eyes, and elect instead to trust in what they were taught. If you can't see the similarity to Pavlov's dogs here I don't know what else to tell you.

I am not going to pay a fortune to be taught as truth what I know is a lie. I refuse to salivate to that bell.

I have been to college. You should be able to see that. I'm also very intelligent. You should be able to see that clearly as well.

And quite frankly, when Bryan took down my post, (and in it's totality might I add), that ended this argument, and then made a baseless accusation claiming that what I had to say was a personal attack, it was clear to me that a professor might not be willing to stand up for the truth. That is a sad fact, and I know that not all professors are that way. But my point is simply this, if Bryan, whose studies are centralized in applied behaviour and counseling can be influenced by the powerful, and very possibly senile, Marcus Bach, all because he "knew his co-workers" then what faith can I put in the education that you say I should have. I mean, after all, I have spoken to the professors at the chiropractic colleges and very few impressed me. One even wailed to me that they could teach anything they wanted since after all it was their school. My question to him was, "Even if it's wrong?" The illustrious Marcus Bach, who has written "The Chiropractic

Story” and others, should know who I’m talking about. His name was Fredrick Barge. When he died I received an email talking about the death of a chiropractic ICON.

I explained how well my grandfather was known by the chiropractic industry, and Marcus refused to believe it.

<http://www.nsirtech.com/barge.html>

<http://www.nsirtech.com/fred.html>

<http://www.nsirtech.com/parker.html>

<http://www.nsirtech.com/james.html>

I actually received a personal email from James Parker, Jr. and for awhile we corresponded. He told me then how his family had actually boycotted the very college that his father had founded.

I have more letters and documentation that supports who I am and who my grandfather was. I can show our efforts to get this in the schools and can prove that the reason why it’s not in the schools is not because we were not educated sufficiently. I have spoon fed this work to the world, in fact, and still you say that I need to follow the status quo.

No, for it is not I who stares blankly at the bones not knowing what it means.

Let me leave you with one final thought:

“But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Despotism, it is their RIGHT, it is their DUTY, to throw off such Government, and to provide new Guards for their future security.”

Tammy Kennedy
Certified Nerve Signal Interference (NSI) Specialist
(580) 402-3375

PS. Don’t think that there isn’t something drastically wrong with the medical/chiropractic system as a whole. I, who have the means, to make the effort to do something about it, have the responsibility to try. That was Bill’s quest at some point when he started out on his discovery of chiropractic’s failings when Laurie Jean died. Now that we’ve come this far Bill, I would like to introduce you to another young woman who died needlessly. Her name is August Joy, she was almost 17 when the hospital system killed her while she was begging to get up and walk.

August Joy

Comment by **Bill Kinsinger** on September 18, 2011 @ [9:11 pm](#)

Sad to report I spoke with another new victim this past week. A 33 year old woman from Wisconsin who suffered bilateral VAD immediately following a chiro visit. She has significant permanent deficit, what a tragedy. When will you xxxxxx give up this nonsense?

~~~~~

Comment by **Marcus Bach** on September 19, 2011 @ [8:33 am](#)

bill, you and your petty name calling. Its funny you don't mention the people who have strokes leaving their dentist or hair dresser. You need to pay more attention to your new board position and covering up the money trail. Good luck with that.It's also funny how you little brother Brian never edits your remarks.

~~~~~

Comment by **Bryan Farha** on September 19, 2011 @ [9:12 am](#)

The answer to that is because I have just read it—I have made the edit in fairness.

~~~~~

Comment by **Bill Kinsinger** on September 20, 2011 @ [12:38 pm](#)

So Marcus, can you give us any recent examples of anyone suffering a stroke at their dentist office or hairdresser? And if so, was the stroke a direct result of an action intentionally administered by the practitioner? And if you can, would these theoretical examples excuse the actions of chiropractors who so regularly cause profound permanent neurologic deficits and sometimes death in otherwise healthy young men and women? I look forward to your response.

~~~~~

Comment by **Bill Kinsinger** on September 20, 2011 @ [12:44 pm](#)

Also Marcus, I appreciate your concern for my time management but I am perfectly capable of fulfilling all of my professional responsibilities while simultaneously striving to stop the senseless deaths and injuries that all too often occur in direct association with chiropractic "treatment". Speaking of this, I was thinking yesterday how much more logical it would be for the various state chiropractic boards to be under the umbrella of state medical boards along with other non-medical health care entities, but then it occurred to me that this would be an insult to those disciplines as they are based in science as opposed to chiropractic which of course is about as scientific as astrology and big foot.

~~~~~

Comment by **Bill Kinsinger** on September 20, 2011 @ [12:47 pm](#)

Lastly, I do have three younger brothers and Dr. Farha (Bryan) is not one of them.

~~~~~

Comment by **Cindi** on September 20, 2011 @ [1:51 pm](#)

It's just like all those people who take prescription drugs, they read all of the side effects and continue to take the drug anyway then complain when their health deteriorates or they incur a debilitating condition because of the drugs they are taking. People who see chiropractors are told of the risks and sign a waiver stating that they understand the risks. As do all who undergo surgery, they sign a waiver stating they understand they may never wake up to see their loved ones again. There is risk with anything. Bottom line is people need to educate themselves not rely on blogs like this one to form their opinions. I am pro chiropractic and have been for years, I see a chiropractor and so all five of my children as do my grandchildren. I don't take medicine, I eat healthy and exercise, don't smoke, drink or do drugs. All these things are important for a healthy lifestyle. If I didn't eat healthy and exercise and if I smoked this could cause a stroke and I couldn't blame anyone but myself, not even a chiropractor. Dr. Kinsinger, I think you are a mean and selfish man. I hope not everyone reading this assumes all MD's are like you, just like you want everyone reading your rant to think all chiropractors are evil. Shame on you, your not educating you're bullying and using "some" statistics, not the whole story to prove your point.

~~~~~

Comment by **Bill Kinsinger** on September 20, 2011 @ [3:01 pm](#)

Bullying??? No, just speaking up for the countless victims, and families of victims in the case of death, who the chiropractic industry so wishes would simply fade away. While you likely feel that "chiropractic works", it is quackery plain and simple. If it were not for the fact that it is dangerous quackery we could probably just walk away but the deaths and devastating permanent injuries demand accountability, and since the industry is not willing to police itself someone has to step in draw a line in the sand. All we are asking for at this point is to stop the worthless neck twisting which is all done in the name of a philosophical belief system, or at the very least advise all patients of the potential risks including stroke and death. Yes, Cindi, despite your claims the reality is that the vast majority of chiropractors don't provide informed consent prior to twisting those fragile necks.

~~~~~

Comment by **Marcus Bach** on September 21, 2011 @ [7:23 am](#)

Aprox 60,000 Chiropractors in the U.S. Avg. 100 patient visits per week. Thats 6 million adjustments per week. 24 million per month. 288 million chiropractic adjustments per year and all you can do is dream up a couple of people that just happened to be having a stoke symptoms and went to a

Chiropractor because of their symptoms. Happens in MDs offices as much or more than chiros. Thats also 288 million Cindi's in this country that would tell you to your face that you are dead wrong. You can't win. Others have tried to discredit the Chiropractic profession and failed. I look forward to watching you finally give up and take on a new cause. Maybe going back to school and becoming an actual treating physician. Someone who actually helps people instead of tearing them down. But I want you to continue this blog. It's going to help.

Comment by **Bill Kinsinger** on September 21, 2011 @ [10:24 pm](#)

Finally give up? Never. Let me pose a question to you Marcus. If chiropractic is a legitimate "art", why is it not offered as a course of study at a single public university in this country? Medical bigotry perhaps?

Comment by **Tammy Joy Kenndy** on September 23, 2011 @ [11:34 pm](#)

Bill

The reason why "chiropractic works" at all is primarily due to two things. First, the chiropractor actually corrected the articulation of the rib head in relation to the spine. This is Chiropractic's true calling, and this is where the chiropractor's domain should end, at least for now.

Secondly, on occasion, the chiropractor will accidentally correct the position of the head or pelvis while they are trying to, according to the chiropractor, "adjust" the atlas or the sacrum, or lower lumbar. The trouble with this is that they can't repeat their success because they don't actually understand what it was that they did. They simply have been taught wrong. This is not really the individual chiropractor's fault. The failing actually goes back to the Palmer's, originally, and now the fault is the schools' responsibility.

As I said, we tried to raise their standard and they refused. I do also know that in the last fifty years or so they have been trying to steal our work without actually being responsibly taught, and, they most certainly refuse to pass the test on what they should already know. They think that if they watch us work and then pick our brains they are somehow expert in what we do. If you look at the actual court record when I had to defend Dr. Craton's work against the Chiropractic Board you will find they are actually asking me how to do it.

Quite simply, the Board used the Court to try to forcibly extract the research instead of being responsible enough to pay me to teach them. And by the way, the first chiropractor I ever worked on was the future Board of Chiropractic Examiners President in Oklahoma. All it took for this to happen was for me to say I was Dr. Craton's granddaughter and knew his work.

Of course, the reason why they are doing the damage that they most certainly are, as you have clearly seen, is because they do NOT understand the true design of the atlanto-occipital joint.

They don't understand the design; they don't understand how it works; they don't understand the difference between normal and abnormal; they don't understand how to assess abnormal; and they truly don't know how to fix it.

These are the scientific facts that you should be entrenched in.

As far as the damage that is being put upon the people due to not having timely access to the proper therapy is concerned, I will have to let another speak for me. I just know that she is 38 years old and has lived in horrific pain her entire life. She has been to every doctor that she could possibly see starting with the neurologist. The doctors didn't know what to do for her, including the chiropractors. And interestingly enough, she even died due to her medications. When I saw her about a month ago I found a bilateral slip of her pelvis off of the sacrum, and, her head was subluxated, (partially dislocated), as well. I have seen her about four times now and she reports that she actually understands what it is like to not be in pain for the first time in her life. She has finally found hope.

A similar case is coming to me for the first time this week; she was actually referred to me by none other than a chiropractor.

Now what are you going to do?

Tammy, what in the world are you talking about. Nothing you say makes any sense. Bill makes more sense than you and thats scary. You have no training and now you are treating dead people. You will be revisited by the state board. I promise. This time no one will ask you what you are doing they just will make you stop. Go to school and get a degree like the rest of us. Bill, who would teach the Chiropractic classes at your major universities? You have a hard time thinking things thru. I recently met a young lady that was planning on being a orthopedic surgeon like her cousin. He told her if he had to do it all over again he would be a Chiropractor. But like I said earlier, keep up your rants. It is important that you continue to show your true character. In the future it will come in handy. Thank you

~~~~~  
**ANOTHER MISSING POST: - (THIS ONE WAS BLOCKED ALTOGETHER)**

Comment by **Tammy Kenndy** on September 24, 2011 @ [4:15 pm](#)

Well obviously Marcus, she was revived. Does that make any sense to you? I also have more training than you could ever hope for since as I said the chiropractic industry passed on the

improvement. I've been in this since 1988, officially, and, I studied under the master. I also see the worst cases just so you know. These people come to me after the other modalities have failed. I suspect you are a chiropractor, or have been?

Marcus, you have done more ranting than Bill has just so you know. And you make little sense, apparently you are having a hard time thinking things through.

You gave me my defense, should I actually be revisited by the Board, when you said that what my grandfather did was NOT actually chiropractic.

And I quote ...

"he really didn't practice Chiropractic".

EXACTLY!

You see the Board has no jurisdiction over something that they know nothing of. The law states that chiropractic is two things .. first, it has to be taught in the colleges, and second, it has to be approved by the Board.

So if the Board is going to have any jurisdiction over me then they have to teach it, and they have to approve it. I rather doubt that will ever happen, and if it does, then they will have to pay me. Since after all this work obviously originated from my grandfather, and now I have the public record to prove it.

I will also say Marcus that it is extremely disturbing to me that you put chiropractic over the people. This is your biggest failing and should be your downfall altogether. After all, there are many, many more "patients" than there are chiropractors, if you haven't realized.

Now Marcus, I would hope that you would stop your threatening rants, and Bill I would hope that you would realize that we should team up.

Sincerely

PS. So I suppose that when D.D. Palmer started his practice, or that when modern medicine was first born that there was a license to practice at that time? What ARE you thinking?

PPS. Rest assured, I could do a better job with my web site in listing the good practitioners in this new field, than the Board has done in policing their own. All the State would have to do is break the press that the authority is established already and then give the information on how to contact the source:

Comment by **Bill Kinsinger** on September 25, 2011 @ [7:07 am](#)

Thanks for stepping up to the plate for me on that one Marcus, but why won't you answer my simple question. I tell you what, I'll rephrase it and open it up to Tim and anyone else. If chiropractic is anything other than quackery, then why has not a single public university in our country sought fit to offer a degree? Is it possible that those of us who are working to expose chiropractic for the hoax that it is have that much influence?

~~~~~  
Comment by **Tammy Kennedy** on September 25, 2011 @ [11:03 am](#)

You know I find it interesting Bill that you refuse to acknowledge me and my efforts in all of this.

The information I present speaks for itself, and anyone who gets stuck on my "credentials" are extremely short-sighted.

The fact that my last post, which stuck up for you as well, never even saw the light of day here is disturbing to say the least. Obviously censorship of the First Amendment is alive and well in Bryan's little world.

As far as your question Bill about what the schools teach ... as I said earlier, the schools can teach anything they want to, since after all they are their schools. Apparently that is true with the 'regular' universities as well.

Should those schools offer a program in Chiropractic the way it is today? ... which as we all know is near verbatim to what they taught more than 100 years ago. Absolutely not!! But should those schools perhaps teach what Chiropractic passed on, that I know so much about? Probably. The problem is that ego and professional jealousy is unfortunately ruling supreme here. Basically, if someone else, whomever that might be, can't take the credit for the discoveries that we have been presenting for the last 50 years ... well, you see the opposition I'm facing. This opposition is political clear and simple and yes, the thinking public can see that. Of course, those who oppose me will CLAIM that it is a matter of public safety, and at this point, that argument is laughable. You should know that several years ago, one of your group, (a medical doctor and surgeon in California), when I was looking for an 'expert' witness to come tell the Court what Chiropractic was, admitted to me that I could actually ... what were the words he used? ... oh yeah ... VALIDATE chiropractic. He shocked me when he said that. But as we all know this is not chiropractic because they refused to teach it.

Now I don't really expect that Bryan will let this post through, since after all he is on an unrealistic censorship kick regarding opposing the truth and free speech ... so, I have already

posted this blog, since July 31st, on my web site. The missing posts are still there for all to see and I will be updating that page with the recent activity which does include my comments that were barred here.

It shouldn't take long for that page to turn up in a Google Search. And now, I have a clear cut example of the horrific failings of the established system to present to not just the people, but the legislature, the Governor, and the President as well, ... and with just a click too ... 😊. Isn't technology grand?

Hey Bill

I want the videotape of me performing our work returned as well as any materials that might have been sent to you along with that tape. You would have received this some time in between 2005 and June of 2008, when I was requesting that you come tell the Court what chiropractic was.

Seems to me if ever Bill had the chance to put the nail in the coffin it was then.

Do you all want to know what he told me once he had our materials in hand?

He said that he wasn't actually any kind of expert regarding manipulative therapy.

Bill, send the mentioned materials to:

Tammy Kennedy  
133 S. Burdel  
Enid, OK 73703

And for the record Bill, you impress me as someone who unduly wants the stage.

Cam, as far as you believing that I have side stepped answering questions here, chances are that Bryan has been guilty of removing or blocking my posts. I have posted the blog in it's entirety, from July 31 to September 25, which still has my answers completely intact, on my web site:

[http://www.nsirtech.com/PDF%20files/CHIROPRACTIC\\_BLOG\\_SPOT.pdf](http://www.nsirtech.com/PDF%20files/CHIROPRACTIC_BLOG_SPOT.pdf)

That page is actually rising much faster than I ever thought possible and is currently number six on google.

I'll make one final update with this post to keep the record and then I'm done here. Of course, I will have to link back to the recent rhetoric from Cam and Bill since I won't be posting that garbage, after all, that is nothing more than Bill vying for position against a greater cause ... mine. As the world should be able to see by now, if he wants to debate and win, then he needs to be able to present a solution to the real issue, which of course has to do with the proper handling of the atlanto-occipital joint, which as he has admitted, he knows nothing of. Oh wait, that's right, I've got that argument wrapped up already. Such a shame that Bill refused to step up and work in tandem with me; chances are that the chiropractic colleges would've gone to their knees had he done so.

In summary, Bill knows about the history of chiropractic; he also knows about the dangers of chiropractic, but, he has failed to "hold them accountable" for the right reason, all the while he has failed to see the log in his, and his profession's own eye.

He is admittedly, (or at least to me), NO EXPERT regarding manipulative therapies, and I find it odd that he believes that he can still be found credible in the public's eye after this post sees the light of day.

As I said Bill, return the mentioned materials to the address given. If any copies exist then they should be returned as well.

Dr Kinsinger I am a chiropractic physician who has the right to prescribe medication in NM. Your video is both wrong and demeaning, a question I have for you is this. How many sorry MDs hurt people? How often do people die because of medical physician mistakes? What is your vendetta? I love and care for my patients, I diagnose very well and your absurd propoganda is out of line. You disgrace medicine and yourself for your lies and vindictive deceit. There are poor physicians in every field, and you are one in yours. Zeke Brimhall, DC, APC

~~~~~

Comment by **Bill Kinsinger** on October 20, 2011 @ [1:21 pm](#)

Vendetta? Sir, my goal is to stop the senseless deaths and permanent neurologic injuries that all too often result following chiropractic “treatment”. Chiropractic is a hoax, and a dangerous hoax at that. You and your colleagues are nothing more than 21st century snake-oil salesmen.

~~~~~

Comment by **Tammy Kennedy** on October 22, 2011 @ [10:32 am](#)

Dare I make one more comment here?

Bill

The senseless neck twisting you are talking about is only if the chiropractor has not the sense to understand that cracking the neck both ways is not specific in any manner whatsoever. This is what is dangerous and yes does cause strokes, at times, if done too many times, or too close together. Is there a scientific basis for that type of “treatment”? Absolutely not, except to get some, if the patient is lucky, temporary relief from the stress caused by a true subluxation. Of course when I use the term subluxation I am not talking about a chiropractic subluxation. You should know by now what I mean and if you do not then I welcome your inquiry.

As far as the snake oil salesman thing is concerned, I believe that historically it was the medical doctor who was actually guilty of that ... (tongue in cheek).

Bill you should know with your training as a doctor which system of the body controls the rest.

So let's just talk about that for a minute:

The nervous system controls what?

Take the stress off of the nervous system and what do you suppose you will get?

Now you do have to understand that not everybody focuses on those “little holes” that are between the vertebrae.

Imagine this if you can:

Too little motion between the head and the atlas, (“yes”), causes too much motion between the atlas and the axis, and this motion is not the normal “no” motion, but instead an abnormal flexion of the atlas on the axis. This happens because the head is subluxated, or partially dislocated, in relation to the atlas. Now what do you suppose happens when the atlas tilts forward as it does when the head is stuck like that?

With all your knowledge as a doctor you should be able to figure that out.

Now where is the dens located?

Are you thinking yet Bill?

What I have just shared with you is not a chiropractic concept. This understanding is exclusively an NSIR concept. Is this understanding what should be taught in chiropractic and medical colleges alike across the country? Absolutely!

Your senseless pride in your institutions and your institutional conditioning is alarming with the light so clearly shown on the obvious truth that I have just tried to teach you. When will any of you do the right thing?

You're like an addict Bill. The first step to recovery is admitting you have a problem. The biggest problem you have at this point is that your argument makes no sense in the light of bigger issues, and your "credentials" are going to eventually fail you. One day you may actually be asked just why you refused to refer even one victim of chiropractic, (either past or future), to the field, (NSIR), that actually understood how to effectively take the stress off of the nervous system instead of electing to only degrade the field, (Chiropractic), that did not understand how to do the same.

You're in this for the wrong reason Bill, that much is clear.
